

DEVIXO SOLUTIONS | WEB DEVELOPMENT INTERNSHIP PROGRAM

Professional Personal Portfolio Website

Project Report - Task 01

STUDENT NAME	Rana Asad Ullah
INTERNSHIP DOMAIN	Web Development
TASK NUMBER	Task 01
TECHNOLOGIES	HTML5, CSS3
SUBMITTED	10 October 2026

1. Objective

The objective of Task 01 is to design and develop a modern, professional and fully responsive personal portfolio website using only **HTML5** and **CSS3**. The website presents my profile, technical skills, education, projects and contact information through a clean and attractive interface.

The site is written entirely by hand. No CSS frameworks (such as Bootstrap or Tailwind CSS), website templates or ready-made UI kits were used, so every layout, color and animation comes from my own HTML and CSS code.

Learning goals

- Build a semantic, well-organized HTML5 document.
- Style it with CSS3: Grid, Flexbox, custom properties and media queries.
- Create a layout that adapts to desktop, laptop, tablet and mobile screens.
- Add smooth scrolling and simple, professional hover animations.
- Manage and publish the project with Git and GitHub.

2. Technologies Used

Technology	How it was used
HTML5	Semantic structure using header, nav, main, section, article, footer, form and labelled inputs.
CSS3	Custom properties (design tokens), CSS Grid and Flexbox layouts, media queries, transitions and hover effects.
Google Fonts	Bricolage Grotesque for headings and Figtree for body text, with system-font fallbacks.
Font Awesome	Integrated icons to enhance the website's visual appeal and improve user navigation.
Git and GitHub	Version control and hosting of the source code, images, screenshots and this report.

Not used: Bootstrap, Tailwind CSS, downloaded templates or any other UI framework.

3. Website Structure

The project follows the recommended, clean folder structure:

```
portfolio/  
|-- index.html    (all page content)  
|-- style.css     (all styling)  
|-- README.md     (project documentation)  
|-- images/  
|   |-- favicon.png  
|   |-- profile.jpg  
|   |-- project1.jpg  
|   |-- project2.jpg  
|   |-- project3.jpg  
|-- screenshots/  (report screenshots)
```

Page sections

Section	Content
Home	Name, tagline, short introduction, profile image and call-to-action buttons.
About	Personal introduction, academic background and career interests.
Skills	Skill cards with progress bars: HTML, CSS, JavaScript, ReactJS, NodeJS, Git/GitHub etc.
Education	Degree, university, study period and relevant coursework.
Projects	Three project cards with image, description, technologies and GitHub/demo links.
Contact	Email, phone, location, social links and a contact form (Name, Email, Subject, Message, Submit).
Footer	Social icons, copyright text and quick navigation links.

4. Design Approach

The design aims for a professional, readable and consistent look. A deep navy and cobalt-blue palette gives a trustworthy feel, and a warm yellow accent highlights calls to action and hover states.

Color theme

#12203A Ink (text, footer)	#223679 Blue (buttons, links)	#FFC83D Sun (accent)	#F4F6F9 Paper (background)	#FFFFFF White (cards)

Typography

Headings use **Bricolage Grotesque** (bold, tightly spaced) and body text uses **Figtree** at 1.05rem with a 1.65 line height for comfortable reading. Font sizes scale with clamp() so headings stay balanced on every screen.

Layout and responsiveness

- A 1100px centered container with consistent section spacing (5rem on desktop, 3.5rem on mobile).
- CSS Grid for the hero, skills, projects and contact areas; Flexbox for navigation, buttons and the footer.
- Projects: 3 columns on desktop, 2 on tablet (max-width 960px), 1 on mobile (max-width 760px).
- Navigation collapses into a hamburger menu on mobile using a pure CSS checkbox technique (no JavaScript).
- Fluid images and cards, with no unnecessary horizontal scrolling at any width.

Accessibility and usability

- Semantic HTML landmarks and properly labelled form fields.
- High-contrast text, visible keyboard focus outlines and descriptive aria-labels on icon links.
- Animations are short and subtle, and are disabled for visitors who prefer reduced motion.

5. Website Features

- **Sticky navigation bar** with links to every section and a mobile hamburger menu.
- **Hero section** with name, tagline, introduction, profile image and two call-to-action buttons.
- **Skill cards** with icon badges and progress indicators.
- **Project cards** with thumbnail, description, technologies and GitHub/demo links.
- **Contact form UI** with Name, Email, Subject, Message and a Submit button (front-end only).
- **Two-part footer**: social icons (LinkedIn, Instagram, GitHub, WhatsApp) above a divider; copyright and navigation links below.
- **Smooth scrolling** between sections.
- **Hover animations** on buttons, navigation links, skill cards, project cards and social icons.
- **Fully responsive** layout for desktop, laptop, tablet and mobile.

Responsive testing results

Device	Viewport width	Layout	Horizontal scroll
Desktop / laptop	1366 px	Two-column hero, 3-column project grid	None
Tablet	820 px	2-column project grid	None
Mobile	390 px	Single column with hamburger menu	None

6. Code Screenshots

Key parts of the source code are shown below. The complete code is available in the GitHub repository.

```

10. Conclusion

This task helped me build a complete, professional portfolio website from scratch using only HTML5 and CSS3. I practiced semantic markup, CSS Grid and Flexbox, custom properties, responsive design with media queries, navigation, hover animations and UI design principles, and I used Git and GitHub to organize and publish the project.

The finished website works well on desktop, tablet and mobile screens, has no unnecessary horizontal scrolling, and presents my skills, education, projects and contact details in a clear and attractive way. It also gives me a solid foundation to keep improving as I learn JavaScript and build more advanced projects.

11. GitHub Repository Link

The complete source code (HTML, CSS, images), this PDF report, screenshots and README.md are available here:
